

MOHAMED SHAZAN

Data Analyst | Aspiring Data Scientist & ML Engineer

Yakgasmulla, Weeraketiya, Sri Lanka | +94 76 758 6821 | mshazan250@gmail.com

[LinkedIn: mohamed-shazan-050213289](https://www.linkedin.com/in/mohamed-shazan-050213289) | [GitHub: github.com/mshazan250](https://github.com/mshazan250)

PROFESSIONAL SUMMARY

Detail-oriented Data Analyst with hands-on experience in Python, SQL, Power BI, and machine learning fundamentals, currently pursuing a BSc in Data Science. Skilled in building data pipelines, interactive dashboards, and predictive models that turn raw data into actionable insight. Maintains an active public GitHub portfolio of independently built Python applications, spanning AI-driven analytics, database-backed business systems, and web development. Combines analytical rigor with strong business acumen gained from real operations and sales-analytics experience, and is committed to continuous learning across AI, machine learning, and data science.

CORE SKILLS

- **Programming & Query Languages:** Python, R, SQL, HTML, CSS, JavaScript
- **Data Analysis & ML:** Pandas, NumPy, Scikit-learn, TensorFlow, Statistical Analysis, ETL Pipelines, Predictive Modeling
- **Visualization & BI Tools:** Power BI, Tableau, Excel (Advanced), Matplotlib/Seaborn, Dashboard Design
- **Databases & Tools:** SQLite, MySQL, Git/GitHub, Streamlit, Flask, Jupyter Notebook, Vercel Deployment
- **Design:** Figma, UI/UX Design, Graphic Design, Responsive Web Design
- **Other:** Business Analytics, Data Cleaning, Problem-Solving, Cross-Functional Reporting

PROFESSIONAL EXPERIENCE

Operations & Sales Analyst — Melbn Metal, Ja-Ela, Sri Lanka

June 2024 – Present

- Manage daily operations in a high-pressure manufacturing/sales environment, ensuring accuracy and efficiency across core business processes.
- Own cash management and financial reconciliations, maintaining 100% accuracy in daily transaction reporting.
- Prepare monthly sales summaries and performance reports, translating raw transaction data into clear, actionable insight for management.
- Build data visualizations and dashboards to communicate sales trends and KPIs to leadership, supporting data-driven decision-making.
- Identify and resolve workflow bottlenecks, improving reporting turnaround time and overall operational efficiency.
- Applied this firsthand operations exposure to independently design and build a Python-based inventory management system (see Projects) to digitize stock tracking for the business.

PROJECTS

REVOLT_X — AI-Powered Renewable Energy Optimization Platform

Python

- Designed and built a multi-module data platform that analyzes energy production and consumption patterns to support renewable-energy optimization decisions.
- Engineered a dedicated analytics module (analytics.py) to process and interpret energy datasets, surfacing usage trends and efficiency opportunities.
- Built monitoring/control logic (control.py) to simulate optimization actions, and an automated monthly reporting module (monthly_summary.py) for recurring performance summaries.
- Developed an interactive dashboard (dashboard.py) with chart-based visualizations of energy metrics and trends, deployed live at revolt-x.vercel.app
- End-to-end ownership: data logic, visualization, and live deployment, demonstrating ability to ship a complete analytics product independently.
- Source code: github.com/mshazan250/REVOLT_X

Melbn Inventory Management System

Python, SQLite

- Built a database-backed inventory management application to digitize stock tracking and reduce manual reconciliation errors at Melbn Metal.
- Designed the relational database schema (database.py) to store stock items, transactions, and inventory levels in SQLite.
- Developed the application logic (app.py) to record stock movements, update inventory levels, and generate inventory reports.
- Managed project dependencies via requirements.txt for a reproducible, easily deployable setup.
- Directly informed by hands-on operations and sales-analyst experience — identified a real workplace gap and engineered a practical software solution to close it.
- Source code: github.com/mshazan250/Melbn-inventory-system

SHAAZ Salon — Salon Booking Website

HTML, CSS, UI/UX

- Designed and built a single-page salon booking website front end, applying UI/UX layout principles to create a clean, customer-facing interface.
- Self-directed front-end build covering structure, styling, and content layout, reflecting working knowledge of responsive web design fundamentals.
- Source code: github.com/mshazan250/SHAAZ-SALON

Heart Disease Prediction App — AI Healthcare Diagnostics Dashboard

Python, Scikit-learn, Streamlit, Plotly

- Trained and benchmarked four classification models — Logistic Regression, Random Forest, SVM, and a neural network (MLPClassifier) — on clinical patient data, reaching up to 90% accuracy and 0.94 ROC AUC.
- Built a full ML pipeline (train_ml.py, train_ann.py) covering preprocessing, standardization, model evaluation (precision, recall, F1, ROC), and automated confusion-matrix and feature-importance reporting.
- Developed an interactive Streamlit dashboard that takes live patient inputs, runs predictions across all four models simultaneously, and visualizes risk with a Plotly gauge chart.
- Added supporting features including multi-format file upload (CSV/PDF/DOCX/image) with correlation analysis, downloadable report generation, and WhatsApp result sharing.
- Source code: github.com/mshazan250/HEART_DISEASE_PREDICTION_APP

EDUCATION

BSc (Hons) in Data Science — London Metropolitan University

2025 – 2026 (In Progress)

Higher National Diploma (HND) in Data Analytics — Pearson (UK) / ESOFT Metro Campus, Colombo

2023 – 2025

G.C.E. Advanced Level (A/L) — Physical Science Stream

2021 Completed

G.C.E. Ordinary Level (O/L)

2018 Completed

CERTIFICATIONS & CONTINUOUS LEARNING

- Data Analytics Certification Course
- HP Online Certification (HP LIFE)
- Machine Learning & Data Science — Simplilearn and Alison Online Learning Platforms (in progress)
- Cybersecurity Fundamentals — Cisco Networking Academy (in progress)
